

aqi simple sms site version 1.0

<http://www.aqi.com/>

This document is also available as a readme.txt in the ssss site bundle.

## 1 What is SSSS?

The SSSS Simple SMS Site Software provides a building block for aqi.com customers interested in providing sms sending capabilities from their own website. Several aspects of the site can be tailored to suit you or your business, including user access levels, email contents and even adding your own company logo.

Sending a message is as simple as logging in, typing your message and recipients numbers and clicking send.

## 2 Installation

- Extract the contents onto your webserver
- Type in your web browser - <http://your/webserver/address/setup.php>
- Edit the details in /inc/dbinfo.inc.php to resemble your own database login details (shown on setup.php)
- You should now be able to view the login screen by visiting <http://your/webserver/address/>

Two accounts will be set up

Admin account

- username admin
- password admin

Guest account

- username guest
- password guest

NOTE : It is recommended that you change your admin account login details

Login as admin and go to admin >> configuration

Update the details to reflect your own site

NOTE : URL's should end with /

The site is now ready to use

## 3 What features does it offer?

- Send customised messages
- Select from SMS or WAP Push
- Specify single or multiple recipients
- Choose from flash or non-flash messaging
- Enter your own originator and message (up to 160 characters)

  - Host your site and database with (aq) (hosting charge from £100 + vat per year)

#### 4 What do all these files do?

- dbinfo.inc.php - Contains the database name, username and password
- restricted.inc.php - Contains the message displayed when a page cannot be accessed (usually incorrect details or wrong type of user - guest trying to view an admin page etc)
- validate.inc.php - Contains the process for checking users access levels
- header.inc.php - Contains header details
- footer.inc.php - Contains footer details

#### 5 Requirements

Curl needs to be installed - <http://curl.haxx.se/>  
An aql sms account is required, sign up at [www.aql.com](http://www.aql.com)
